

FINANCIAL MODELLING

Since 1997 TMP Consulting has developed numerous customised financial models to meet a wide variety of client requirements. We pride ourselves on maintaining long-term relationships with our clients, who consistently rely on us to develop highly confidential, commercially-sensitive models.

Using our unique financial model templates, which have been thoroughly audited and verified for accuracy, we develop customised models specifically tailored to serve your individual needs. Our trusted proprietary financial modelling procedure ensures a systematic and efficient process, so you can totally depend upon the robustness and accuracy of our models.

Model risk management services

Modelling errors can prove costly or even disastrous. It is common practice for businesses to have numerous spreadsheet models, often developed and maintained by different people, to support them in planning and making key commercial decisions. But how do you know that you can trust these models?

At TMP we offer specialised consulting and testing services to support you in managing and mitigating your financial modelling risks. Our testing service will rigorously check each of your models to ensure they have individual and mutual integrity and produce outputs that you can consistently rely on to make sound commercial decisions. Our consulting service is designed to help you entrench financial modelling best practices into your business, to ensure your analysts can readily identify and eliminate errors in your models.

Accuracy guarantee

We employ a rigorous procedure to ensure that every one of our models meets the highest possible quality standards. These include integrated control and 'error-checking' mechanisms to ensure every model is both robust and accurate. We deliver a comprehensive user manual and training with your customised model, if required, and remain fully available after delivery for any necessary upgrades or clarification.
